# PACVOID

## VOID SYSTEM

### PRODUCT DATA SHEET

PacVoid is a new void system for the Australian construction market. Designed and manufactured in Australia, PacVoid aims to eliminate the current issues with waffle pods construction, such as;

- Negative Environmental Impacts
- Waste
- Scrap Collection
- Extended Lead-Times
- Price Fluctuations

The revolutionary patented design, PacVoid is made up of an inner recycled cardboard core wrapped in an outer membrane (Unicor) which is water proof and UV resistant, making PacVoid extremely strong and durable for Australian conditions.

- ✓ ENVIRONMENTALLY FRIENDLY
- ✓ NO SCRAP COLLECTION
- ✓ REDUCED TRANSPORT COSTS
- ✓ PRICE COMPETITIVE
- ✓ MORE AFFORDABLE
- ✓ NO MESS

**DESIGNED & MADE IN  
AUSTRALIA**

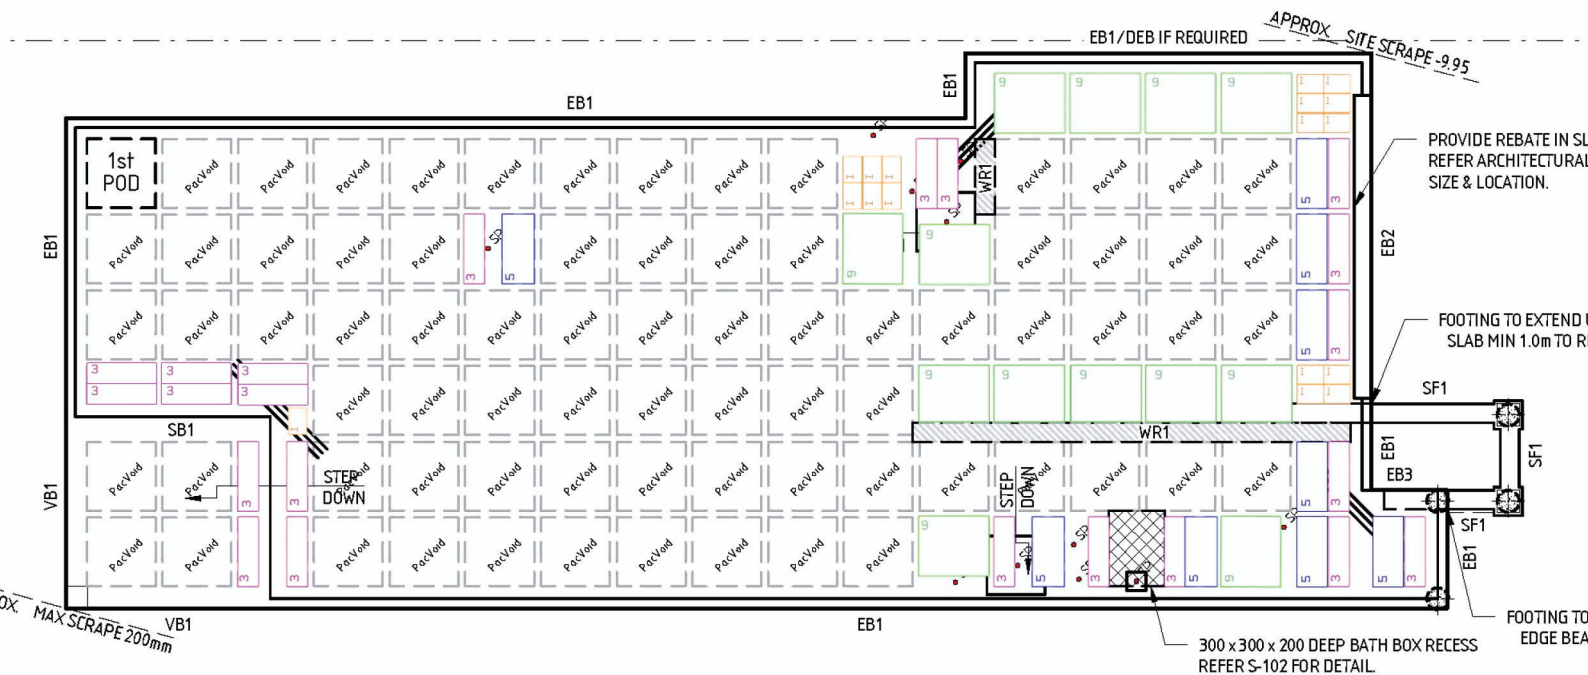

# SUSTAINABLE VOID CO.

## DESIGN

One of the key benefits to the PacVoid system is the relationship between PacVoid and the slab design. In-conjunction with Structerre Consulting slab designs are independently engineered to suit PacVoid's system. PacVoid void formers come in 6 different sizes;

- 1090 x 1090mm
- 900 x 1090mm
- 700 x 1090mm
- 500 x 1090mm
- 300 x 1090mm
- 400 x 300mm

It's essentially paint by numbers system, place by numbers is more accurate. There is no oversupply or wastage of any kind, the slab is designed to suit these sizes and it is a matter of laying corresponding size voids in the location marked on the plans.

## DETAIL

PacVoid uses new technologies and practices to help their customers increase productivity and affordability. PacVoid's new design practices improve a broad range of elements that result in true cost reductions. By reducing the total area of voids required per slab, eliminating wastage on site, decreased deliveries collections from site, minimize site management and more.

**Improved brand reputation:** Investing in sustainable products can enhance a company's reputation.

**Reduced costs:** Management and direct input costs are reduced by using environmentally viable products.

**Increased sales and market share:** Many consumers prefer products that are eco-friendly, and companies that offer sustainable products can increase their sales and market share in this growing market.

**Long-term viability:** By investing in sustainable products, companies can ensure their long-term viability

**Regulatory compliance:** Governments around the world are introducing more stringent environmental regulations.
